Our Top Tips for Measuring

Even if you have no DIY or measuring experience, don't worry - measuring is easy! The following pages will guide you through how to measure for your beautiful new blinds, but here are some general tips to keep in mind as you measure:

- Always use a metal tape measure - cloth or plastic ones can stretch, giving you inaccurate measurements
- Double check everything! If you're even slightly unsure about a measurement you've taken, measure again until you're certain
- Measure to the nearest millimetre, or to the nearest fraction if you're measuring in inches

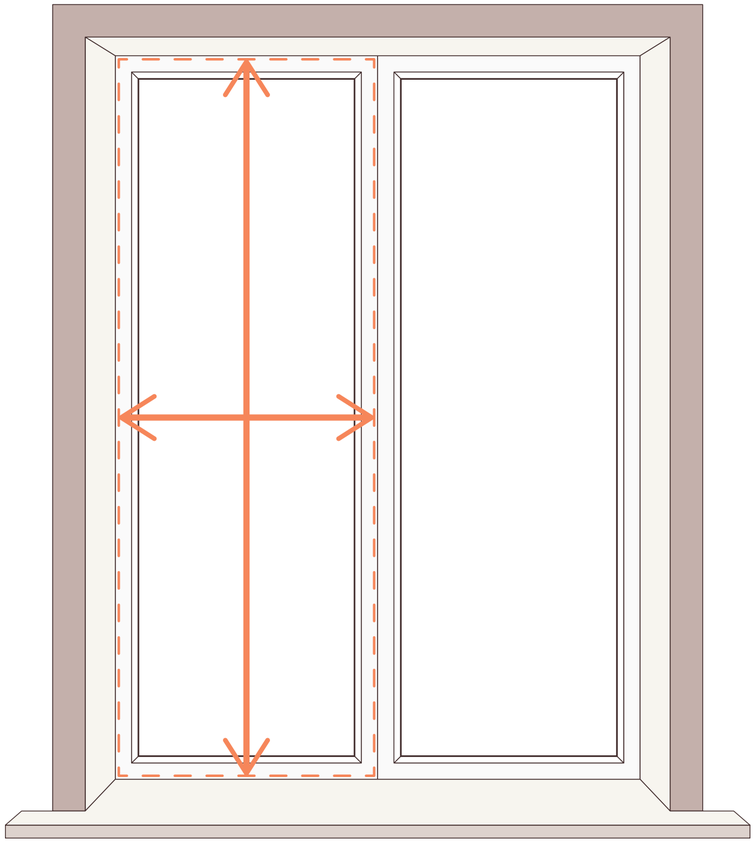

Don't worry! Even if your measurements aren't quite right, our SureSize measuring guarantee has you covered.

Measuring the *Window Frame*

Why *Measure the window frame?*

Our Café Curtains are designed to fit directly to the frame of your window or door, so all we need is the measurements of the frame to ensure your curtain fits perfectly.

- Measure the width of the frame
- Measure the drop for the whole curtain for however much of the window height you want to cover
- Do not make any allowances for different headings

Measuring the area

Measuring the width is easy - just measure the width of the frame!

Measure the drop from the top of where you'll attach the rod, down to the bottom of where you want the fabric to finish. If you measure the entire height of the frame, leave about 15mm of space at the bottom so the fabric doesn't touch the windowsill.

There's no need to make any allowances for different curtain headings. We'll calculate fullness and heading height from your measurements.
